

World's Cheapest and Strongest Pickup Ambulance

Minibus based ambulances are very popular in developed world because they provide a ready-made vehicle in which medical equipment is added and you are good to go. When this model is introduced into developing world one runs into many problems. Minibuses are not designed to ply the unpaved rough rocky or muddy roads common in most of Asia and Africa. Here pickups like Toyota Hilux Vigo and Ford Ranger rule the day. Non-profit organizations like health NGOs require a sturdy ambulance that can take the wear and tear but they have to suffice with minibus based ambulance and accept the fact that they will have to replace them pretty quickly.

Soni to the rescue!!

Soni has a 98 years tradition of philanthropy and it is in this tradition that we have designed a pickup based ambulance and are now making it available to qualified non-profit organizations at our cost. This way medical institutions and health NGOs are able to acquire an ambulance based around a vehicle that is designed for poor roads and can thus last a lot longer than minibus-based ambulances at a fraction of the cost. Please visit our sister company [Yasir](#) for more information on this versatile ambulance.
